

## REKENANALYSE&ZO

### *A Clear and Detailed Picture of Your Child's Math Skills*

When a student experiences challenges with math in later years of primary school, it is often because the student did not master the skills taught as a foundation in previous years. The math curriculum taught at school is cumulative. That means that each year, the math lessons build on the lessons provided in the previous year. The skills learned in Group 3 must be solid, as these skills are used as a base upon which additional skills are taught in Group 4. This continues through Group 8, which lessons building upon skills taught in all of the previous learning years. Thus, all math skills in Group 3 are a foundation for the math lessons taught through Group 8.

REKENANALYSE&ZO provides a detailed picture of your child's mastery of math skills over the various math lessons and at each group level. Each math skill component will be checked systematically to determine exactly where the areas of improvement are for your child. After these specific skills are identified, your child can then follow tutoring lessons separately that are focused specifically on improving only the areas that need attention.

### *Is This Right for My Child?*

REKENANALYSE&ZO is suitable for all primary school children in Groups 3-8 who seek to improve their mathematics skills.

### *What Can I Expect?*

REKENANALYSE&ZO consists of up to 8 sessions. In each session, the child will take one math assessment which focuses on specific math skills. After the assessment, the tutor reviews the results. Then tutor teaches the student the areas that need improvement and provides practice problems to reinforce the lesson.

### *What is the Result?*

REKENANALYSE&ZO is a math assessment which provides an overview of your child's math level and skills. This assessment will provide a clear and detailed picture of your child's strengths and weaknesses in each area and level of math. This information can then be used to create a tutoring program specifically aimed at the areas of improvement identified in the assessment.

### *What are the Costs?*

REKENANALYSE&ZO costs €225, which includes the administration of the math assessment, a detailed report regarding your child's level in each of the various math components, and an explanation of the results. This does **not** include the costs of the math tutoring, which are charged separately. VAT not charged.

### *What Can I Do after the Assessment?*

You may help your child at home or engage with one of the tutors at LEREN&ZO for math assistance. You may also share this information with school. A transfer meeting with the school can be arranged for €55 per hour. Follow-up assessments are also available upon request.
